## SUMMARY

NLP/LLM specialist with experience on the YandexGPT team, focused on LLM evaluation, error analysis, and post-training (SFT, DPO/GRPO). Improved model performance across the TAU and BFCL benchmarks through systematic error analysis and dataset improvements, working across model scales from 7B to 235B (primarily the Qwen family, including Qwen3-30B-A3B MoE).

## SKILLS

Python (5+ years, incl. personal projects) · SQL/YQL · Pandas · PyTorch (2 years) · NLP / Large Language Models (LLMs) · LLM Evaluation & Benchmarking (BFCL, TAU, TAU2) · Model Context Protocol (MCP) · SFT and Preference Optimization (DPO/GRPO) · Training Data Preparation & Analysis · ML Model Quality / Error Analysis · Data Processing Pipelines (Nirvana/DataLens)

## WORK EXPERIENCE

**Analyst-Developer — Yandex, Agents & Code** · 2024–2026

- Increased Pass@1 on the TAU benchmark by 20 percentage points and BFCL by 15 percentage points through systematic model error analysis and targeted dataset improvements.
- Ran evaluation and post-training work (SFT, DPO/GRPO) across model scales from 7B to 235B parameters, primarily on the Qwen model family, including the Qwen3-30B-A3B MoE model.
- Built multiple dialogue datasets (100,000+ dialogues combined; single- and multi-turn, up to 50 turns) for the Alice assistant's alarm-setting scenarios, covering varied task types including math/time-calculation reasoning.
- Built an MCP (Model Context Protocol) tool enabling Alice to set alarms, connecting the assistant's dialogue understanding to the actual alarm-setting action.
- Designed and ran 20+ ML experiments evaluating model quality improvements across training approaches.
- Analyzed LLM performance on BFCL, TAU, and TAU2 benchmarks, identifying error root causes and prioritizing fixes.
- Collaborated with developers and editors on data preparation and result analysis.
- Translated and reviewed relevant research papers, presenting key findings to the team.

**Computer Science Teacher — School 57** · 2021–2025

- Taught computer science to students in grades 8–11; prepared students for CS olympiads.
- Explained complex algorithmic and programming concepts to a technical audience — foundation for the clear technical communication this role also draws on.

**1C Analyst — RG-Soft** · 2022–2024

- Analyzed clients' business processes and requirements; designed automation solutions in 1C.

## EDUCATION

Moscow — School 57 (Secondary Education, Advanced Studies in Computer Science)
